Self-driving ERP™

Experience the power of people-centric ERP solutions designed for the speed of business.

The digital revolution.
Reshaping life. And business.

All around us, the impact of the Digital Revolution is clear. In devices, in apps, even in cars that lift the burden of driving from us – innovation is everywhere.

The Digital Revolution has also affected the way organizations operate through new models and capabilities that have given rise to newer and better ways of working. With this, come rising customer expectations.

At the same time, today's business environment has become faster and more demanding. People need business enterprise applications that are built for these challenges – that can engage, create impact and free them from as many administrative tasks as possible.

It's time to revolutionize business software.

In this fast-paced business environment, you need smart business applications tailored for the needs of your industry and your people. Unit4 Business World is a people-centric Enterprise Resource Planning (ERP) solution built for organizations with strong ambitions to be leaders in their sector. It helps you unlock the best from your team and adapt to new opportunities and challenges – faster, more cost-effectively, while avoiding the hurdles of disruption.

Built for people.

It all starts with simplicity. Unit4 Business World is the only ERP solution designed from the ground up for people-centric organizations. It's built to adapt to the needs of people that collaborate on dynamic cases and projects, rather than forcing them to follow static processes.

We've taken into account how people work and have created "self-driving ERP". Just as self-driving cars minimize the burden on drivers, Business World makes processes much more efficient by automating tasks, suggesting actions and providing insight and business context to decisions. As a result, many tasks can be fully executed with minimal to no input from users, enabling your people to regain valuable time to focus on areas where they make the difference.

Our self-driving ERP enables a clear, intuitive and insightful user experience — the kind of simple and context-rich interaction you've come to expect on your personal devices, recreated in the business arena.

The result? Ease of use paired with a complete and relevant user experience that predicts the kind of information needed by people to get their job done — faster and better.

What's the secret sauce behind self-driving ERP? Smart technology that knows the business context your people are in and delivers the most relevant information to help them think and act more effectively. Unit4 Business World leverages the latest innovations of the digital revolution, such as predictive analytics and sentiment analysis to transform complex information into smart information, making it easy for your people to collaborate and make the best decisions.

UNIT4

Designed for change.

For businesses, change is driven by a variety of forces such as growth and expansion, incorporating new business models, integration of acquisitions, reducing operational costs and inefficiencies, cutting back when economic conditions change, and so forth.

The ability to transform and adapt is key. This is especially true (and crucial) in a digital world, where new opportunities are introduced instantly. To continue harnessing the advantages of this new world, you need software that is engineered to constantly adapt. A solution that lets your organization match and lead businesses that are all vying to stay ahead of the curve.

That's why Business World is built on an elastic foundation that extends as you evolve. Its unique architecture enables your people to respond to changing market conditions, resource availability and new rules and regulations, more cost-effectively and without getting tripped up by typical disruption. Information, workflow and analytics are all seamlessly integrated so one change automatically populates throughout the software to keep your enterprise applications working at the speed of your people – and the requirements of those that you serve.

Innovate at lower cost and lower risk.

Unit4 Business World is built on a modular architecture. You upgrade the modules you want, when you want, in the order you want. You're in the driver's seat. You don't have to upgrade the entire system if you wish to benefit from specific leading-edge functionality. This modular approach lowers risk, minimizes cost and increases your ability to quickly bring innovation into your organization.

Engineered for value.

Solution Highlights
Business World enables you to manage your entire organization in a single, integrated cloud ERP suite.

Financial Management
Give your finance team a rich accounting system that helps them run the business reliably.

Human Resources & Payroll
Get comprehensive support for all aspects of the success of your people, from hire-to-retire, to talent management to payroll processes. Stay organized and in control – no matter the circumstances.

Planning, Budgeting & Forecasting
Eliminate multiple, disparate spreadsheets and get your team on the same page, with flexible planning and budgeting solutions.

Procurement Management
Streamline procurement practices and minimize costs, without sacrificing control.
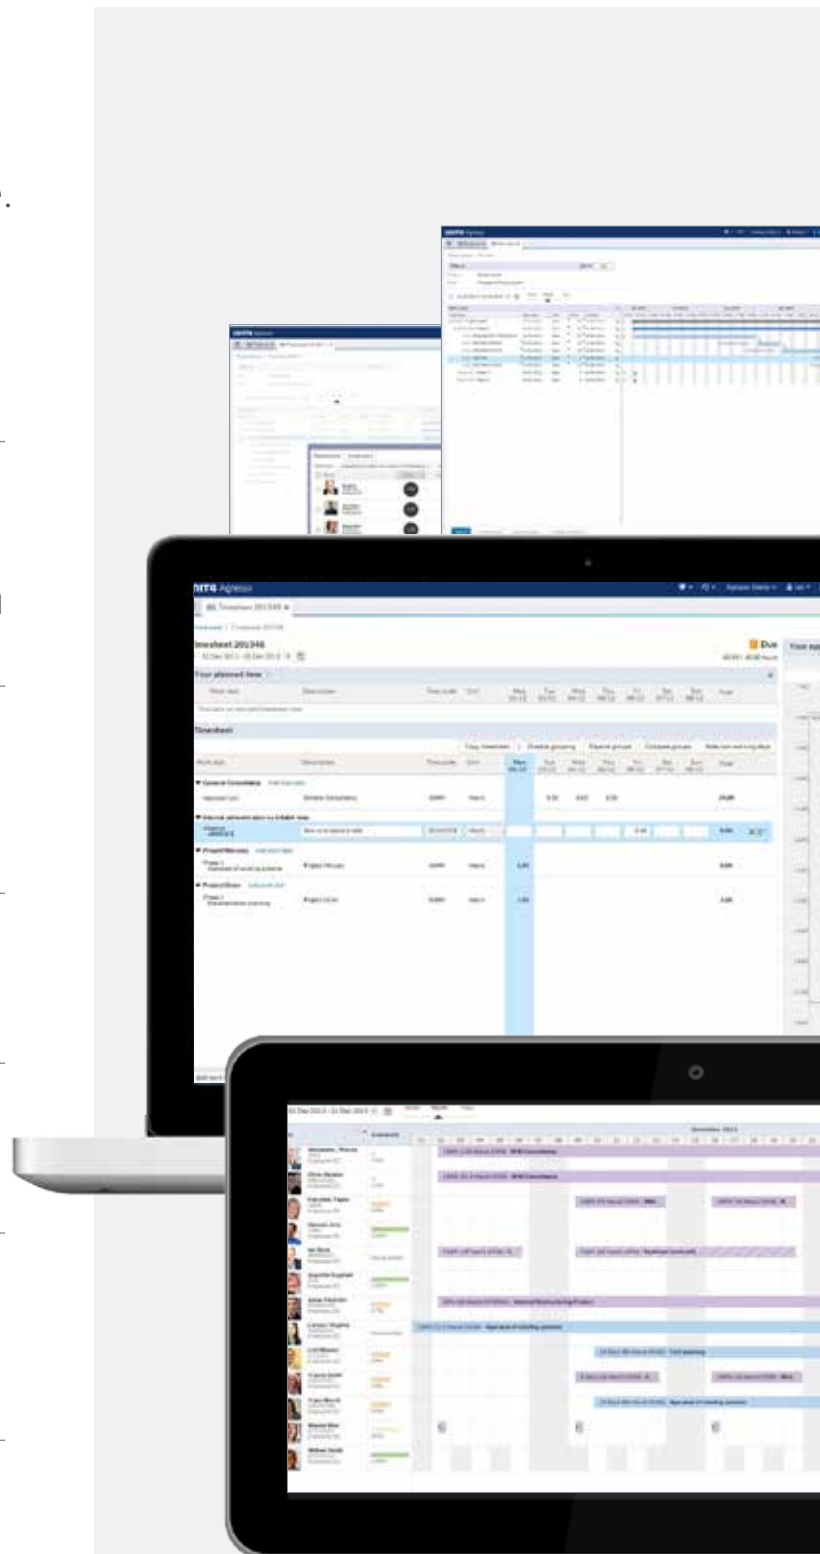

Project Management
Optimize, automate and manage your processes with our integrated end-to-end project solution.

Field Service Management
Enable your managers, call center staff and field workers to all share the same consolidated customer information, wherever they are.
Estate and Asset Management
Proactively maintain all your properties to ensure everything stays in the best possible repair and save time and money.
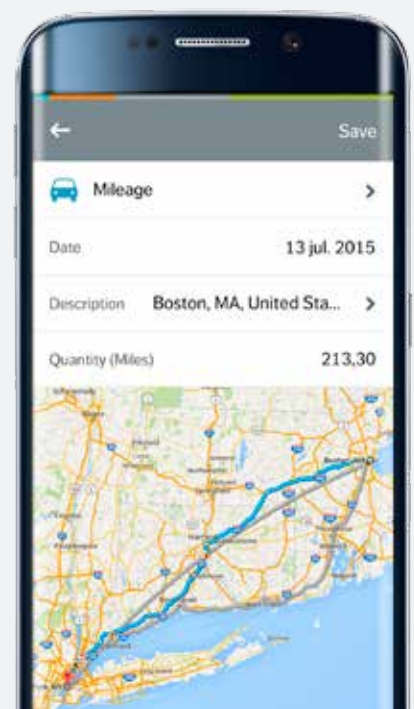

UNIT4

The Unit4 People Platform.

Organizations are often shackled by the rigid concepts of their ERP software. Unit4 Business World is different! The People Platform unlocks the power of ERP with a people-centric approach that lets service organizations "Make the Rules" and adapt, as needed.

Offering choice for each user

Unit4's ERP system doesn't just simplify your organization's processes – it empowers your staff through better engagement and by focusing on more meaningful tasks. It engages through solutions that offer different device options, each optimized for the task they are working on at that point in time and specific location. So when your staff are traveling, their smart phones and tablets become their best vehicles to capture their expenses or time, and when they're in the office, where they have full access to their notebook or computer to prepare their budget or detailed project plan and resource allocation.

We apply a "mobile first" approach to all our designs to ensure we support your increasingly mobile workforce – optimally. In essence this means: offering each of your people a User Interface with a design and format optimized for the moment of the action, where the underlying People Platform ensures at all times that the information delivered is simple, complete and relevant.
The 4 elements of the People Platform

A Smarter Personal Experience

The clear, clean user interface delivers a simple and relevant experience that keeps you connected on all devices to all the information you need.
Business Capabilities

Industry-specific functionality enabling end-to-end business processes, tailored to your needs in the front- and back-office.

Smart Context

State-of-the-art predictive technology is at the heart of our self-driving ERP, providing you with smart and relevant information and data. This simplifies decisions and processes, and enables focused collaboration.
Elastic Foundation

A smart information model that captures the essence of your business, no matter how simple or complex — it drives your business processes with powerful and flexible business rules, reporting and analytics.

Cloud Your Way

What makes our cloud solution different? It's tailored towards the needs of your organization. Our superior design allows for greater security and flexibility to move from public to private cloud — or even to on-premise! You can pause an incoming upgrade and undo unwanted changes by switching to a previous snapshot of your data within minutes.

Moreover, the solution that we deliver to our customers has the same functional depth, no matter if it's in the cloud or on-premise. Quite simply, it's one of the richest and most flexible cloud ERP solutions on the market.
